SUMMARY

Frontend-focused software engineer with 4+ years building production web and mobile applications, most recently at Turkey's largest cryptocurrency exchange (7M+ users). Works across the full stack — React, Next.js, Vue, React Native on the frontend; Node.js and Go on the backend; and Solidity smart contracts. Strong record of refactoring legacy systems, shipping new features at scale, and integrating AI into existing products. Fluent English (IELTS Academic 7.0), effective in remote and international teams.

EXPERIENCE

Paribu Technologies | İstanbul, Turkey

Software Engineer (Frontend) April 2023 – May 2026

Turkey's largest cryptocurrency exchange, serving 7M+ users.

- Developed and maintained the customer-facing exchange web platform across four major versions (v3–v6), plus the mobile application.
- Built for distinct audiences — end customers, operations staff, and managers — including the Paribu Destek support portal and internal admin panels for the Customer Experience team.
- Delivered features across the full spectrum of AI involvement: fully AI-built tools, AI-assisted hybrid development, AI integrations into existing products, and traditional hands-on builds.
- Refactored and rewrote legacy modules, integrated third-party services, and shipped new features at 7M-user scale.
- Built backend services for internal applications in Go.

Hyperdev IT Consulting & Services | İstanbul, Turkey

Frontend Developer October 2022 – April 2023

Auto-financing platform covering the full car-purchase journey.

- Built the end-to-end flow across web and mobile: car selection, financing options, approval, document upload and e-signing, operational review, disbursement, and installment tracking.
- Developed three role-based interfaces — customer, operations team, and admin — each tailored to a different user type.
- Created reporting dashboards for company bank status and total funds/debt, and contributed to backend development.

Digine Blockchain

Blockchain & Frontend Developer April 2022 – October 2022

- Delivered blockchain projects (NFT, DeFi, token, staking) for clients across Turkey and Europe.
- Built full-stack products end to end: Solidity smart contracts, backend, and frontend, with frontend–web3 integration.
- Shipped multiple projects rapidly within a small, agile team.

Xanterra Parks & Resorts | Mount Rushmore, South Dakota, USA

Work & Travel Program June 2017 – September 2017

- Worked as a coffee roaster and cashier through the US Work & Travel program to develop English fluency and gain international work experience.

EDUCATION

Marmara University | İstanbul, Turkey

B.Sc. Environmental Engineering (English) September 2015 – July 2020

- Graduated as top student of the department; GPA 3.37 / 4.00.
- Thesis: Occurrence of Microplastics in Water and Wastewater.

Tampere University of Applied Sciences (Erasmus+) | Tampere, Finland

Energy and Environmental Engineering — Exchange Semester January 2018 – May 2018

Adnan Menderes Anatolian High School

High School Diploma 2011 – 2015

SKILLS

Languages: JavaScript, Go, Solidity

AI: LLM feature integration, AI-assisted development, AI-driven product features
